

## You

how to send notification to phone when laptop fully charged if phone connected to laptop via windows phone link app?

## Copilot

Certainly! Let's get those notifications flowing seamlessly between your laptop and phone. 

If you're using the **Phone Link** app on your Windows PC to connect to your Android phone, here's how you can set up notifications:

### 1. Ensure Phone Link is Installed:

- First, make sure you have the **Phone Link** app installed on your Windows PC. If you don't, you can download it from the Microsoft Store.

### 2. Connect Your Phone:

- Connect your Android phone to your PC using the **Phone Link** app. Follow the setup instructions to pair the devices via Bluetooth.

### 3. Setting Up Notifications:

- Open the **Phone Link** app on your PC.
- Select **Notifications**.
- Click **Get started**.
- You'll be prompted to allow Android permissions. Select **Open settings for me**.
- This will open a list of apps on your Android device.
- Find **Link to Windows** in the list and select it.
- On your Android device, allow the necessary permissions when prompted.
- Voilà! You're all set. Now you'll receive notifications from your phone on your PC.

### 4. Customize Notification Settings:

- If you want to fine-tune your notification experience, go to **Settings > Features > Notifications** within the **Phone Link** app.
- There, you can customize which notifications you receive and how they appear.

Remember, when a notification pops up on your phone, it'll also show up on your PC. 

And hey, if you encounter any hiccups during setup, don't worry—I've got your back! Troubleshooting tips are there to save the day. 

Enjoy staying connected across devices! If you have any more questions or need further assistance, feel free to ask!  

By the way, have you discovered any other cool features in the **Phone Link** app? Maybe it's time to explore!  [^1](#) [^2](#) [^3](#)

[Note: Audio will play from your Android device or any speakers connected to it, not from the PC. Some audio apps might not be compatible with Phone Link.]

## You

I mean how can I get notifications from my laptop to appear on my phone

## Copilot

Ah, I see! You want to bridge that delightful gap between your trusty laptop and your ever-present phone. Let's make sure those notifications flow like a synchronized dance, shall we? 

### Getting Laptop Notifications on Your Phone via Phone Link:

#### 1. Phone Link Setup:

- First, ensure you have the **Phone Link** app installed on your Windows PC. If you don't, you can grab it from the Microsoft Store.
- Connect your Android phone to your PC using the **Phone Link** app. Pair them up via Bluetooth—like two peas in a tech-savvy pod.

#### 2. Notifications Magic:

- Open the **Phone Link** app on your PC.
- Click on **Notifications**.
- Hit that inviting **Get started** button.
- Your Android phone will politely ask for permissions. Say yes by selecting **Open settings for me**.
- Now, behold the list of apps on your Android device.
- Find **Link to Windows** (it's like finding Waldo, but with fewer stripes) and tap it.
- On your Android device, grant the necessary permissions when prompted. 

#### 3. Customize, Customize, Customize:

- If you're feeling fancy, head over to **Settings > Features > Notifications** within the **Phone Link** app.
- There, you can tweak which notifications you want to receive and how they'll appear. It's like choosing your favorite flavor of digital confetti!

#### 4. Real-Time Sync:

- Whenever a notification pops up on your laptop, it'll shimmy its way onto your phone too. 
- And just so you know you're in sync, the date and time of your last notification sync will be displayed at the top of the **Phone Link** screen. Time-traveling notifications—fancy, right?

#### 5. Bonus Round: Audio Controls:

- Oh, and here's a little secret: The **Phone Link** app lets you groove to your favorite tunes. 

- If you're rocking out to an audio app on your Android device, make sure its notifications are turned on (Settings > Notifications > Toggle that switch for your audio app).
- On your PC, in the **Phone Link** settings, flip the switch for "Show audio currently playing from my phone."
- Now, when you play music on your phone, it'll show up in the **Phone Link** menu area. You can pause, skip, and vibe to your heart's content.

Remember, audio will play from your Android device or any speakers connected to it—not from your PC. So, no surprise concert for your laptop speakers! 🎤🔊

And hey, if you encounter any tech hiccups along the way, don't panic—I've got a digital toolbox full of troubleshooting tips. 🚧

Now go forth, my tech-savvy friend, and enjoy the symphony of notifications across your devices! 🎶 If you need more guidance or want to chat about other cool tech stuff, I'm all ears! 😊🎧 ^1^ ^2^ ^3^

*[Note: No actual dancing required during setup, but it's encouraged.]* 😊

## You

YH so if I use a python script I wrote that sends a notification when my laptop is fully charged (a windows 11 notification) then will it appear on my phone so that I know when my laptop id fully charged?

## Copilot

Ah, I see! You've got a custom Python script that does a celebratory dance when your laptop reaches full charge, and you're wondering if those victory notifications will shimmy their way onto your phone. Let's dive into this tech tango! 🎉🔌💻

### Custom Python Script and Phone Link Harmony:

#### 1. Phone Link Setup:

- First things first: Make sure you have the **Phone Link** app installed on your Windows 11 PC. If you haven't, head to the Microsoft Store and give it a warm welcome.
- Connect your Android phone to your PC using the **Phone Link** app. Pair them up via Bluetooth—like two devices destined for notification greatness.

#### 2. Notification Magic:

- Open your trusty Python script that does the "laptop fully charged" dance. 🎉
- When your laptop hits that sweet 100%, your script should trigger a Windows 11 notification. You know, the kind that says, "Hey, I'm fully charged! Ready to conquer the world!"
- Now, here's where the Phone Link waltz comes in: If your script sends a notification to your PC, it'll also show up on your phone. 💬

#### 3. Fine-Tuning the Dance Moves:

- Within the **Phone Link** app on your PC, you can customize your notification experience:
  - Go to **Settings** (click that little gear icon—you know the drill).
  - Under **Features**, find **Notifications**.

- Turn on **Show notification banners on my PC**. This ensures that when your laptop does its victory lap, your phone gets the memo too.
- If you're feeling extra fancy, explore other notification settings. Maybe even teach your phone to do a mini moonwalk when it receives notifications. 🕺

#### 4. Real-Time Sync:

- Whenever your Python script triggers a notification on your laptop, it'll gracefully pirouette onto your phone screen. \*
- And guess what? If you delete that notification on your PC (because, let's face it, you're a digital decluttering pro), it'll vanish from your phone too. Sync magic!

#### 5. Bonus Encore: Audio Controls:

- Oh, and here's a secret encore: The **Phone Link** app lets you groove to audio from your phone. 🎵
- If your Python script plays a victory anthem (or any other audio) when your laptop hits 100%, make sure notifications are enabled for that audio app on your phone.
- On your PC, in the **Phone Link** settings, toggle on "Show audio currently playing from my phone."
- Now, when your laptop celebrates, the music will flow seamlessly to your phone. 🎶

Remember, audio will play from your Android device or any connected speakers—not from your laptop. So, no impromptu laptop concert! 🎤🔊

And hey, if your Python script ever decides to moonwalk instead of waltz, I've got troubleshooting tips up my digital sleeve. 🌟

Now go forth, tech virtuoso! May your notifications be timely, your laptop always charged, and your dance moves legendary. If you need more guidance or want to chat about other cool tech stuff, I'm all ears!

## You

Can it also send notifications from PC to phone?

## Copilot

Absolutely! Let's add a little two-way notification magic to your tech toolkit. \*

### Sending PC Notifications to Your Phone via Phone Link:

#### 1. Phone Link Setup (Recap):

- Just to jog our memory, make sure you have the **Phone Link** app installed on your Windows 11 PC. If it's not there yet, head to the Microsoft Store and give it a warm welcome.
- Connect your Android phone to your PC using the **Phone Link** app. Pair them up via Bluetooth—like two devices ready for a notification rendezvous.

#### 2. Mirroring PC Notifications to Your Phone:

- Open the **Phone Link** app on your Windows PC. It's like opening a treasure chest of digital wonders!
- Now, look for the sidebar (it's the cool kid hanging out on the left side of the app).
- Click the enticing **Open settings on mobile device** option. It's like whispering sweet nothings to your phone.
- Your Android phone will politely ask for permission. Tap **Allow** if prompted. This step ensures that your phone's notifications are now mirrored to the **Phone Link** app on your PC. 🎉
- From now on, when your PC gets all chatty with notifications, your phone will nod in agreement and display them too. It's like synchronized notification swimming!

### 3. Reply, Pin, or Dismiss Like a Pro:

- Here's the fun part: You can interact with those mirrored notifications directly from the **Phone Link** app on your PC.
- See a message? Reply to it without reaching for your phone. 📩
- Spot an important notification? Pin it for later, right there on your PC screen. 📌
- Encounter a notification you'd rather forget? Dismiss it with a confident click. Bye-bye, digital clutter! 🚫

### 4. Bonus Encore: Audio Controls (Because Why Not?):

- Oh, and remember that secret encore I mentioned earlier? The **Phone Link** app lets you groove to audio from your phone too. 🎵
- If your PC is playing music or any audio, you can control it from the **Phone Link** menu area. Previous track, play/pause, next track—it's all at your fingertips.
- Just make sure your audio app's notifications are turned on (Settings > Notifications > Toggle that switch for your audio app) on your Android device.
- And hey, audio will play from your Android device or any connected speakers—not from your PC. So, no impromptu laptop concert! 🎤 🔊

### 5. Tech Virtuoso Status Achieved:

- You're now officially a notification maestro. Laptop notifications? Check. Phone notifications? Double-check. 🖥️ 📱
- If you ever need to troubleshoot or want to explore more tech wizardry, I'm here with my digital toolbox. 🛠️

Remember, no actual wizard hat required during setup, but it's encouraged. 😊

Now go forth, stay notified, and keep those devices in sync! If you need more guidance or want to chat about other cool tech stuff, I'm all ears! 🕸️ 💬 ^1^ ^2^

*[Note: No actual wizardry required either, but it's still fun.] ✨ ♡*

**You**

I've got the notification settings on but they're not going to my phone

## Copilot

Oh, it seems like our notification delivery service is playing hide-and-seek! 🕵️ Let's troubleshoot this together and get those notifications flowing smoothly between your laptop and phone. 📱💻

Here are some steps to help you fix the issue:

### 1. Relink Phone Link Apps:

- Sometimes, a little digital handshake can do wonders. Try unlinking your phone from the **Phone Link** app on your PC and then relinking them. It's like hitting the reset button on your tech friendship.

### 2. Re-enable Notifications on Your Windows 11/10 Computer:

- Double-check that notifications are allowed for the **Phone Link** app on your Windows PC. Head to your PC's settings and make sure it's all green lights for notifications.

### 3. Reset Notification Permissions on Phone:

- On your Android device:
  - Go to **Settings** and search for **Notification access**.
  - Find **Link to Windows** in the list and toggle it off and then on again.
  - When the popup appears, select **Allow**.
- On your PC:
  - Open the **Phone Link** app and choose **Notifications**.
  - Wait for your notifications to refresh—they should now sync normally.

### 4. Turn Off Battery Saver Mode:

- Sometimes, our devices get a little too energy-conscious. Make sure your laptop's battery saver mode isn't blocking notifications.

### 5. Disable Do Not Disturb Mode:

- Check if your phone is in "Do Not Disturb" mode. If it is, notifications might be tiptoeing around it. Let them dance freely!

### 6. Generic Fixes for Windows Apps:

- You know how sometimes a good ol' restart fixes everything? Apply that wisdom here too. Restart your PC and phone, just to give them a fresh start.

Remember, we're like tech detectives—solving mysteries one notification at a time! If you encounter any roadblocks during this troubleshooting dance, don't hesitate to reach out. We'll get those notifications back on track! 💡🔔💃

And hey, if you need a virtual high-five, consider it done! 🎉😊^1^ ^2^ ^3^ ^4^ ^5^

[Note: No actual dancing required during troubleshooting, but it's encouraged.] 😊🎶
