You

where can I find a custom power apps component that allows file uploads?

Copilot

You can find custom Power Apps components that allow file uploads in a few places:

1. **Power Apps Component Library**: This is a centralized repository where you can create, share, and reuse components across different apps. You can create a new component library or edit an existing one to include file upload functionality[1].

2. **Power Apps 911**: They offer tutorials and solutions for various Power Apps functionalities, including file uploads. You can follow their step-by-step guide to create a custom file upload component[2].

3. **Microsoft Learn**: The Attachments control in Power Apps allows users to upload and delete files from a list or a Dataverse table. This control can be customized to fit your needs[3].

4. **Matthew Devaney's Blog**: He provides detailed instructions on creating and importing components into a Power Apps component library. This includes enabling the import feature for components[4].

Would you like more detailed instructions on any of these options?
