You

I'm currently uploading a new YouTube channel for my Python channel with the title "Showcasing my Structured English coding language (LinguaCode) #pythonprogrammer #codinglanguage "
How can I write a description for it similar to this:

Welcome back to the AI Apps Challenge 2025! It's been an exciting four months, and I'm thrilled to share my progress so far.
In this video, I'll showcase the completed projects from April, May, and June — covering everything from an AI-powered document extraction tool to a job ad generator, and even a new version of the AI Cover Letter Writer.

I'll also give you a look at the in-progress and almost completed AI Speech-to-Text App, the project for July. Watch as I demo the current functionality, including Voice recording uploads, AI Transcription Summaries, and preliminary transcript exporting.
The journey has been intense, but seeing these apps come to life has been incredibly rewarding.

Stay tuned for updates on what's coming next, and don't forget to check out the GitHub repo for more details on the code and progress!

Also how can I do a hashtags section similar to this but for the topics in my current video:
Hashtags:
#programming #pythonprogrammer #pythonprojectswithsourcecode #aiapplications #aiappschallenge2025 #gemini #hasai #coding #july2025 #2025challenge

Copilot

Absolutely, Hasan — let's craft a compelling YouTube description that matches your tone and structure, while spotlighting LinguaCode and your Python expertise. Here's a tailored version:

☎ **Description**
Welcome to my latest Python dev update! In this video, I'm excited to introduce **LinguaCode**, a structured English-style coding language I've been developing to make programming more intuitive and readable — especially for beginners and non-native English speakers.
You'll see how LinguaCode translates natural language-like syntax into functional Python code, and how it can be used to build real-world applications with clarity and precision. I'll walk through the core design principles, demo a few examples, and share the motivation behind creating a language that bridges the gap between human thought and machine logic.
This project has been a passion piece — blending my love for clean syntax, automation, and accessibility. Whether you're a seasoned Pythonista or just curious about alternative coding paradigms, I hope LinguaCode sparks some ideas for how we can rethink how we teach and write code.
🔗 Check out the GitHub repo for source code, documentation, and ongoing updates!

---

Would you like help writing a pinned comment or GitHub README to go with it? Or maybe a visual metaphor to explain LinguaCode's syntax philosophy?
