You

I'm adding a new position to my LinkedIn profile that I just finished, what skills should I add based on this description: Worked as a Labs demonstrator at university during the second semester helping First Year students under the supervision of Dr Ibrahim Ghafir. In the final week, conducted Group Presentations of the students' websites and reviewed them. Helped first year students throughout with their labs activities (mostly website development and Try Hack Me materials regarding Internet Networks and Protocols), answered any questions and observed general supervision.

Copilot

Based on your description, here are some skills you could consider adding to your LinkedIn profile for the Labs Demonstrator position:

- **Technical Skills:**
  - Website Development
  - Internet Networks and Protocols
  - TryHackMe (Cybersecurity and Network Training Platform)
  - HTML/CSS/JavaScript (if relevant to the websites developed)
- **Soft Skills:**
  - Communication (for guiding students and conducting group presentations)
  - Team Collaboration (working with students and supervising faculty)
  - Problem Solving (answering students' questions and providing support)
  - Leadership (mentoring and supervising first-year students)
  - Presentation and Public Speaking
- **Educational Support:**
  - Student Mentorship
  - Lab Supervision
  - Curriculum Support (in website development and cybersecurity)

Tailoring these skills to fit the wording and focus of your LinkedIn profile is key. Feel free to tweak or expand them based on the specifics of your role! Do you want help with writing the description itself for your profile?

You

How can I adapt this post for the projects section:

Last weekend (Saturday 5th April), I attended BradHack 2025. It was great to attend my first Hackathon, I enjoyed an amazing experience collaborating with fellow students and sharing the challenge of creating a "Gamified" Learning experience that was both interactive and educational, to ensure fun engagement for all users! The game me and my team decided to build was based upon Data Structures & Algorithms.

We initially planned for the game to traverse through a series of levels focusing on Binary-Search Trees, Stacks & Queues, Merge Sorts & Binary Searches and more, with problems catered to different difficulty levels that the user could choose before starting. It was designed with educational aspects in mind hence the hints that could be obtained and in-depth explanations in and around the main window.

Finding a common ground between our tech stack, it was narrowed down to Java as that was the strong suit, the GUI was built using Java, utilising JFrame and Java AWT to create a dedicated GUI, enabling an input window for the solution, which also was paired with a See Solution button which toggled users whom are stuck to able to sneak look at the solution as well as hints and tips, comprehensive instructions and more. We only ended up making the first level which was Binary Trees then but it was a thoroughly enjoyable experience and one that helped to build up my programming and software development skills.

Although we didn't finish, I am very grateful to BradHack 2025, and the great organisers (PiSoc & Applied AISoc) who enabled a platform for students like myself to express their creativity. I am also thankful to my lovely team members Azim, Mila and Bushra for confidently expressing their ideas and willing to participate as apart of my team to help me provide a working solution.

This whole experience instilled a lot more confidence in me to participate in other events in the future, and to not restrict my voice in order to project my ideas.

Copilot

For the **Projects** section of your LinkedIn profile, you'll want to focus on showcasing your key contributions, technical skills, and what you learned, while keeping the description concise and professional. Here's how you can adapt your post:

BradHack 2025: Gamified Learning Experience

Date: April 2025
Description: Collaborated with a team to design and develop an educational game focused on teaching **Data Structures and Algorithms**. The game featured interactive challenges centered around **Binary Search Trees**, **Stacks & Queues**, **Merge Sort**, and **Binary Search**, with tailored difficulty levels, hints, and detailed explanations to ensure a fun learning experience for all users.

Key Contributions:

- Led the development of the first game level on **Binary Search Trees** using **Java**, building a dedicated GUI with **JFrame** and **Java AWT**.
- Integrated features like solution previews, hints, and user-friendly instructions to enhance interactivity and engagement.
- Strengthened programming and software development skills through the creation of dynamic, educational content.

Outcome: While the project was unfinished, the experience fostered confidence in team collaboration, technical creativity, and public engagement. It also inspired participation in future hackathons and similar events.

You can tweak this depending on what aspects you'd like to emphasize. If you want to highlight teamwork or specific technical achievements more prominently, feel free to refine it further. Would you like help tailoring it to match your profile's tone or adding specific keywords?

You

What skills should I add for this?

Copilot

Based on your BradHack 2025 experience, you can add the following skills to your LinkedIn profile:

Technical Skills:

- Java Development
- Graphical User Interface (GUI) Design (JFrame, Java AWT)
- Data Structures (Binary Search Trees, Stacks, Queues, Merge Sort, Binary Search)
- Game Development
- Problem-solving Algorithms
- Educational Software Development

Soft Skills:

- Team Collaboration
- Creativity and Innovation
- Communication (explaining complex concepts in an accessible way)
- Leadership (coordinating ideas and project direction)
- Presentation and Public Speaking

Hackathon Experience:

- Hackathon Participation
- Project Management in Time-Constrained Scenarios
- Rapid Prototyping and Iterative Development

These skills demonstrate both your technical expertise and interpersonal abilities gained from the experience. How does this list feel? Should we tailor it further for a specific career path or role?

You

How about another project based on this, this one was a coursework project that started in February 2025 and is finishing this month and was for a professional client (Lee Baragwanath from the Yorkshire and Humber Regional Organised Crime Unit [YHROCU]): The purpose of this Software Requirements Specification (SRS) document is to define the functional and non-functional requirements for the Enterprise Pro Task Management System. The system aims to provide improved project and task management capabilities, addressing the limitations of the existing Microsoft services used by the client. The system will allow users to create, assign, track, and manage tasks efficiently with different user roles and permissions.

1.2 Product Scope

The Enterprise Pro Task Management System is designed to facilitate seamless project and task tracking within an organization.
The system will provide functionalities to:

- Create, assign, and manage tasks under specific projects.
- Search and filter tasks based on assigned dates, status, and projects.
- Define roles and permissions for different levels of users.
- Improve oversight and security of tasks and projects.
- Ensure updates and tracking of tasks at regular intervals.

By implementing this system, the organization will benefit from:

- Enhanced project management and task organization.
- Role-based access control for better security.
- The ability to track and manage tasks effectively.

Copilot

Here's how you can adapt this coursework project for the **Projects** section of your LinkedIn profile:

Enterprise Pro Task Management System

Date: February 2025 – April 2025
Client: Lee Baragwanath, Yorkshire and Humber Regional Organised Crime Unit (YHROCU)

Description: Contributed to the design and development of a Software Requirements Specification (SRS) document for the **Enterprise Pro Task Management System**, a tool designed to enhance project and task management capabilities for organizational use. The system addressed limitations in existing Microsoft services, offering improved functionality for efficient task tracking and management.

Key Features Designed:

- Task creation, assignment, and management under specific projects.
- Advanced search and filtering based on date, status, and project.
- Role-based access control to ensure security and oversight.
- Regular task updates and tracking features for seamless operations.

Key Contributions:

- Defined functional and non-functional requirements for the system.
- Collaborated with a professional client to ensure alignment with organizational needs.
- Applied skills in system analysis, documentation, and project planning.

Outcome: Successfully delivered an SRS document tailored to the client's requirements, providing a robust foundation for the implementation of the Enterprise Pro Task Management System.

This version emphasizes your technical and collaboration skills while showcasing the professional impact of the project. Would you like to explore skills to add based on this project?

You

Can you update the Key Contributions based on this and also give me some skills I should add (ranked by importance and relevance):

- Tasks: Oversaw project management, Python programming, client meetings, testing frameworks, documentation, and team coordination.
- Achievements:
    - Ensured deadlines were met by delegating tasks and resolving bottlenecks (e.g., stepped in to finalise the SDD when Hammad fell behind)
    - Developed core Python logic, led unit testing, and finalised the technical report.
    - Facilitated client meetings, incorporated feedback (e.g., redesigning the supervisor page), and maintained team morale.
- Attendance: Consistently present across all meetings. Took charge when members were absent e.g., completed meeting minutes in Week 6 when Humayun was absent).
- Impact: Critical to the project's success. Demonstrated leadership, technical expertise, and accountability.

Copilot

Updated Key Contributions Section

- **Project Management:** Oversaw project activities, ensured deadlines were met, and resolved bottlenecks to maintain progress (e.g., finalized the SDD in place of an absent team member).
- **Python Development:** Designed and implemented core Python logic for the Enterprise Pro Task Management System, focusing on functionality and efficiency.
- **Testing & Quality Assurance:** Led unit testing frameworks to ensure reliability and accuracy of system functionalities.
- **Client Interaction:** Facilitated client meetings, gathered requirements, and incorporated feedback (e.g., redesigned the supervisor page based on specific suggestions).
- **Documentation & Reporting:** Authored technical documentation, including the finalized SDD and comprehensive technical report.
- **Team Leadership:** Coordinated tasks, delegated responsibilities, and maintained team morale throughout the project lifecycle.
- **Adaptability:** Took charge during team absences (e.g., completing meeting minutes in Week 6) to ensure uninterrupted progress.

Ranked Skills for LinkedIn

Here's a prioritized list of skills you should add, ranked by importance and relevance:

1. **Python Programming** – Highlight your expertise in core logic development and software implementation.
2. **Project Management** – Reflect your leadership in delegating tasks, meeting deadlines, and resolving challenges.
3. **Unit Testing & Quality Assurance** – Demonstrate your ability to ensure the accuracy and reliability of systems.
4. **Client Communication & Collaboration** – Emphasize your experience in understanding client requirements and integrating feedback.
5. **Documentation** – Showcase your proficiency in creating technical reports, specifications, and meeting minutes.
6. **Team Leadership** – Show your coordination and motivation of the team.
7. **Task Tracking Systems Development** – Highlight your experience in developing organized task management frameworks.
8. **Problem-Solving** – Reflect your ability to resolve bottlenecks and maintain progress under challenging circumstances.

This should give you a strong LinkedIn presence and portray your multifaceted skills effectively. Do you need help polishing the profile or adding anything else?

You

Can you update the outcome based on that as well?

Copilot

Updated Outcome

Outcome: Successfully delivered a comprehensive Software Requirements Specification (SRS) document tailored to the client’s organizational needs. Played a critical role in the project's success by demonstrating strong leadership, technical expertise in Python programming, and effective team coordination. The experience also reinforced proficiency in client collaboration, meeting deadlines, and maintaining high-quality standards through testing and documentation.

This version reflects your significant impact and aligns with the achievements you outlined. Does this resonate with how you want to present your contribution?
