**You**

I've got an interview for an industrial placement role at Leeds City Council coming up. Attached is the job description and my application is pasted below (including the CV skills I highlighted), how can I prepare for the interview?

*Dear Leeds City Council Recruitment Team,*
*I am writing to apply for the following 2025 student placement opportunities at Leeds City Council:*
*Power Platform Developer*
*Data Science*
*Cloud & Platform Engineer*
*As a second-year Computer Science student at the University of Bradford, I am eager to contribute my technical skills, problem-solving abilities, and passion for innovation to these roles. Given my background in automation, data analysis, and cloud technologies, I believe I would be a strong fit for each position.*
*In my current role as an IT Automation Officer at Bradford Children and Families Trust, I have developed an AI-powered document extraction tool and built automation solutions using Power Automate, demonstrating my ability to streamline business processes. Additionally, my academic and personal projects in data analysis, cloud computing, and software development have equipped me with hands-on experience in working with databases, machine learning, and cloud-based infrastructures such as Microsoft Azure and Google Cloud Workspace.*
*I am particularly excited about the opportunity to apply my skills in a public sector environment, contributing to projects that have a real impact on the citizens of Leeds. Whether it's developing automation solutions, analysing complex datasets, or managing cloud platforms, I am keen to learn and collaborate with your team.*
*Please find attached three separate CVs tailored to each role. I would welcome the opportunity to discuss my application further at your convenience.*
*Thank you for your time and consideration. I look forward to your response.*
*Kind regards,*
*Hasan Akhtar 07359 054199*
*https://www.linkedin.com/in/akhtar-hasan-7959b8254/*

Ignoring the parts regarding the Data Science and Power Platform roles and using any other information that can be found online or otherwise regarding Leeds City Council, can you give me tips and information that will help me in my interview?

**Copilot**

Here are some detailed tips and insights tailored to help you prepare for your upcoming interview as a Cloud & Platform Engineer with Leeds City Council:

---

**1. Know the Role and the Council's Context**
**Understand the job:**

- **Technical Focus:** You'll be involved in maintaining and migrating cloud environments (AWS and Azure), troubleshooting performance issues, and managing lifecycle activities (setup, monitoring, decommissioning).
- **Team Impact:** This role is part of a collective journey toward technical transformation. Leeds City Council is modernizing its infrastructure, integrating automation and multi-cloud strategies, and aiming to support critical services for the people of Leeds.

**Know the organization:**

- **Values:** Leeds City Council highlights values like openness, honesty, fairness, and teamwork. Be ready to directly connect your experiences with these values.
- **Social Impact:** They're committed to digital inclusion and projects that support the community—so expressing your passion for making technology work for the public good can set you apart.

Getting a solid grasp of how your role fits into the council's broader mission will help you explain why you're excited about the opportunity and how your work could make a real difference in the community jobs.leeds.gov.uk.

---

**2. Brush Up on Technical Fundamentals**

**Cloud Concepts:**

- **Core Knowledge:** Be comfortable discussing IaaS, PaaS, and SaaS models, as well as the benefits and challenges of multi-cloud environments.
- **Platform Experience:** Even if your current experience is limited, you should be ready to discuss the basics of AWS and Azure. Consider reviewing how cloud migration projects work—what the stages are, the importance of security in the cloud, and how you might troubleshoot performance issues.

**Scripting and Automation:**

- **Tools:** Reflect on your hands-on experience with scripting (e.g., PowerShell). Think of scenarios where you used automation to solve practical problems—this can convert technical know-how into a compelling story during your interview.
- **Practical Examples:** For instance, discuss your AI-powered document extraction tool and how the principles behind automation can apply to maintaining cloud platforms.

Reviewing these areas and, if possible, sketching out quick scenarios or "cheat sheets" for core concepts will boost your technical confidence uk.indeed.com.

---

**3. Prepare for Behavioral and Competency-Based Questions**

**Align with Council Values:**

- **Teamwork and Communication:** Be ready to explain instances where you effectively collaborated in a team or communicated complex technical details to non-experts.
- **Problem-Solving:** Think about a time when you encountered a technical challenge, how you approached the issue, and what you learned from the experience. Use the STAR (Situation, Task, Action, Result) method for clarity.
- **Adaptability and Learning:** Emphasize your eagerness to learn and adapt—qualities that are highly valued in a setting where technology and processes are continually evolving.

**Example Question Themes:**

- "Tell me about a time you solved a technical problem under pressure."
- "Describe how you've handled a challenging project where you had to learn a new tool or technology quickly."
- "How do you ensure you keep up with the latest developments in cloud technology?"

Reflecting on real-life scenarios—particularly from your role as an IT Automation Officer—will demonstrate that you have both the technical and interpersonal skills needed for the role.

---

**4. Get Ready for Scenario-Based and Technical Questions**

**Scenario Walk-Throughs:**

- **Cloud Migration:** Be prepared to discuss what steps you'd take if tasked with migrating an on-premise service to the cloud. This might involve initial assessment, planning security measures, monitoring performance, and managing post-migration troubleshooting.
- **Incident Management:** Think about how you would handle an unexpected outage or performance decline in a live cloud environment. Outlining an approach that covers rapid diagnosis, communication with teammates, and step-by-step resolution can impress your interviewers.

**Hands-On Demonstration:**

- While it may not be a live coding test, interviewers often ask you to discuss how you'd troubleshoot an issue or optimize an environment. Practice articulating your process clearly and logically.

These practised scenarios show that you're not only theoretically sound but also practically ready to manage real-world challenges.

---

**5. Formulate Intelligent Questions and Show Genuine Curiosity**

**Ask About the Team and Projects:**

- Inquire about the current challenges the Cloud & Platform team is facing or recent successes in their migration projects.
- Ask what metrics they use to assess performance and reliability of their cloud services.
- Show interest in the mentoring and training aspects—this demonstrates your eagerness to grow and contribute while learning from experienced professionals.

Your questions can help you illustrate your proactive mindset and genuine interest in the role—and also deepen your understanding of the council's strategic direction.

---

**6. Additional Practical Preparations**

**Documentation & Process:**

- Leeds City Council's recruitment process can include competency assessments and multiple stages—review any guidance notes the council provides about interviews or assessments to ensure you're fully prepared with all the necessary documentation jobs.leeds.gov.uk.

**Mock Interviews:**

- Conduct mock interviews either with peers or mentors so you can refine your responses, particularly for technical explanations and competency-based questions.
- Rehearse explaining your past projects concisely and relate them back to how they would benefit the council's digital transformation journey.

**Mental and Physical Preparation:**

- Ensure you're rested, arrive early (or test your technology if it's a virtual interview), and remember to project confidence even if you're discussing areas where you're still learning.

Small practices like these help you remain calm and articulate, making a lasting impression during your interview.

---

**Final Thoughts**

Your technical accomplishments as an IT Automation Officer—along with your proactive learning attitude—strongly align with what Leeds City Council seeks in an industrial placement candidate. By reviewing both the technical fundamentals and the council's cultural ethos, you'll be well-prepared to discuss:

- How your background in automation and cloud computing can contribute to evolving the council's platforms.
- Your strategies for handling technical challenges in a dynamic, public-sector environment.
- The value you place on teamwork, clear communication, and continuous learning—all essential for the role.

Approach your interview as an engaging conversation where you not only answer their questions but also show your enthusiasm for playing a part in transformative projects that serve the citizens of Leeds.

Good luck—and if you'd like more tips on common interview scenarios, follow-up questions, or even a mock technical walkthrough, feel free to ask!

**You**

I've attached my CV. Based on this, can you suggest some individual tips and scenarios I can mention

**Copilot**

Based on the details in your application and CV, here are some personalized tips and concrete scenarios you can bring to your interview as a Cloud & Platform Engineer at Leeds City Council:

---

**1. Showcase Your Automation and Cloud Experiences**

**Scenario:**

Explain how you designed and implemented an AI-powered document extraction tool during your time as an IT Automation Officer. Detail the challenges you encountered—such as ensuring accuracy, dealing with varied data formats, or scaling the solution—and how you resolved them. You can then bridge this with the role's focus by saying how similar systematic problem-solving and automation methodologies can be applied to maintaining and optimizing cloud platforms. This directly demonstrates that you can take complex, manual processes and transform them into efficient, automated systems.

**Tip:**

Emphasize that while your tool was designed for document extraction, the fundamental principles of automation, error handling, and performance monitoring are directly relevant to tasks like monitoring cloud environments or troubleshooting performance issues in an AWS or Azure setting.

---

**2. Highlight Your Cloud Knowledge and Transferable Skills**

**Scenario:**
Talk about any hands-on experience you have with Microsoft Azure or Google Cloud Workspace from your academic projects, coursework, or personal initiatives. Describe a project where you had to set up, manage, or optimize a cloud service. You might mention:

- **Planning and Execution:** How you planned the infrastructure, made decisions on resource allocation, or ensured security best practices.
- **Troubleshooting:** Perhaps an instance where you noticed a lag or misconfiguration and then used logs or monitoring tools to diagnose and resolve the issue.
- **Outcome:** Conclude with the improved performance or efficiency achieved through your actions.

**Tip:**
Even if your cloud exposure is somewhat basic, discuss your proactive learning (for example, self-study through online courses or certifications on platforms like Udemy or LinkedIn Learning). This reinforces that you're committed to growth and are quick to pick up new skills—a quality that's very appealing to the team moving through a technical transformation.

---

**3. Emphasize Teamwork, Communication, and Adaptability**
**Scenario:**
Describe a situation from your role where you collaborated with a team to integrate a new automation solution. For example, outline how you worked with colleagues from different backgrounds to ensure the solution met both the technical requirements and regulatory or operational needs. Focus on how you communicated technical details clearly, how you adapted to feedback, and how you aligned the project with wider organizational goals.
**Tip:**
Connect these experiences to the council's values. You might say something like, "I thrive in environments where teamwork and clear communication are key, much like Leeds City Council's emphasis on working together for the good of the community." This shows that you not only fit technically but also culturally with the organization.

---

**4. Discuss the Big Picture and Social Impact**
**Scenario:**
Since Leeds City Council operates within a public sector framework where every project can have a direct impact on citizens' lives, share your motivation to work in roles that bridge technology and social value. You could mention an example where the technology you implemented indirectly benefited community stakeholders—perhaps streamlining processes that allowed the organization to allocate more resources to critical services.
**Tip:**
Frame your narrative so it becomes clear that you're passionate about using technology for social good. This not only aligns with the council's mission but also sets you apart from candidates who might focus solely on technical achievement without considering the broader impact.

---

**5. Prepare for Hypothetical and Problem-Solving Questions**
**Scenario:**
Imagine you're asked, "How would you address a significant performance drop on one of Leeds City Council's cloud platforms?" Use this as a chance to:

- Outline your approach: initial assessment (e.g., checking logs and monitoring metrics), isolating the issue (whether it's resource constraints, security incidents, or software bugs), and implementing a solution.
- Mention any similar scenarios you encountered while creating your automation tool, and explain how systematic diagnosis and troubleshooting improved performance.

**Tip:**
Practice explaining such technical scenarios in a clear, methodical way, making it evident that you can think on your feet while using structured problem-solving techniques—this is critical for a role that balances technical expertise with operational resilience.

---

**Final Thoughts and Additional Suggestions**

- **Link Past to Future:** When discussing any scenario, always tie your past experiences directly to how you'll solve similar issues at Leeds City Council. For instance, state, "The experience I gained debugging and automating our document extraction system has prepared me to swiftly diagnose and resolve cloud performance challenges."

- **Prepare a "Lessons Learned" Segment:** Be ready to discuss what you learned from your past projects (e.g., the importance of robust testing, clear documentation, and cross-departmental collaboration) and how you plan to apply those lessons to the council's ongoing digital transformation.
- **Show Enthusiasm for Continuous Learning:** Emphasize your willingness to leverage the training and mentoring opportunities provided by the council. Maybe mention any relevant certifications you're pursuing or plan to pursue, particularly in AWS or Azure.

Approaching your interview with these scenarios in mind will give you a narrative that is both personal and directly relevant to the role. It shows that you not only have the technical skills but also the practical experience, teamwork, and social awareness that align with the council's values and mission.

Would you like more ideas on how to articulate these scenarios or tips on presenting them confidently during the interview?

**You**

(Now Monday, May 12)
What are some questions they could ask regarding the following topics, bear in mind that it is a placement and I am still a university student?
About the company / organisation:
About the industry / business / sector:
About the role:
About the knowledge / experience required:
About the skills / qualities required:

**Copilot**

Great thinking ahead! Since this is a placement interview and you're still a university student, they'll likely tailor their questions to assess your enthusiasm, foundational knowledge, and ability to learn quickly. Here are some potential questions across the topics you mentioned:

---

**About the Company / Organisation (Leeds City Council)**

- What do you know about Leeds City Council and its digital transformation efforts?
- Why do you want to work for Leeds City Council rather than a private-sector company?
- How do you think technology can improve public services in a council setting?
- Leeds City Council values teamwork and fairness—how do you demonstrate these qualities in your work or studies?
- What do you think are the biggest challenges facing local government IT departments today?

---

**About the Industry / Business / Sector (Public Sector IT & Cloud Services)**

- What do you think are the key differences between working in IT for the public sector versus the private sector?
- How do you think cloud computing benefits local government services?
- What are some security concerns that public sector organizations face when using cloud platforms?
- Can you name any recent trends in cloud computing that could be relevant to Leeds City Council?
- How do you think automation and AI can improve efficiency in public services?

---

**About the Role (Cloud & Platform Engineer Placement)**

- What interests you most about this role?
- How do you think your current skills align with the responsibilities of a Cloud & Platform Engineer?
- What do you hope to learn during this placement?
- If you were given a cloud migration project, what steps would you take to ensure a smooth transition?
- How would you approach troubleshooting a performance issue in a cloud environment?

---

**About the Knowledge / Experience Required**

- What experience do you have with cloud platforms like Azure or AWS?
- Can you describe a project where you worked with automation or cloud technologies?
- How do you stay up to date with developments in cloud computing?
- Have you ever worked with databases or data storage solutions in a cloud environment?

- What programming or scripting languages have you used, and how have they helped you in your projects?

---

**About the Skills / Qualities Required**

- How do you approach problem-solving when faced with a technical challenge?
- Can you give an example of a time when you worked in a team to solve a problem?
- How do you manage your time when working on multiple projects?
- What steps do you take to ensure clear communication when explaining technical concepts to non-technical people?
- How do you handle learning new technologies or adapting to unfamiliar systems?

---

**Bonus Tip**

At the end of the interview, they may ask if you have any questions. This is a great opportunity to show curiosity and engagement. You could ask:

- What are some current challenges the Cloud & Platform team is working on?
- How does Leeds City Council support learning and development for placement students?
- What does success look like in this role?

Would you like help crafting answers to any of these questions? Let me know, and we can refine your responses together!

**You**

(Now Thursday, May 15)
Now my interview is in less than an hour, based on my notes and what we previously discussed, how can I make final preperations?
Competency based Questions - Interview prep for LCC Placement

Q) Give me an example of a time when you had to communicate a technical piece of information to an audience of mixed technically minded and lay people.

S - During my internship with BCFT, I joined one of the team meetings. In the team meeting, there was mostly non-technical people who are part of the systems support team and therefore only manage and test the front-end of the software systems.

B - My task during the meeting was to deliver a section about how AI and Machine Learning technologies could be used to improve the existing systems and mitigate any issues that are currently troubling the workers. I started off my delivery by confidently explaining in simple everyday terms how AI and machine learning work, for example, I said that AI is a term used for software that attempts to mimic the functions of the human brain and is usually an app trained solely on data without defining specific functions or behaviours that the software should perform. I then went on to suggest how AI could be used to resolve the existing issues users of the system were having, such as the long and tedious process of filling out social care forms. For this, I suggested that AI could be used to automate the population of certain fields from previous information and external sources e.g. emails, pdf documents, and then this could be reviewed by the social worker and changed if needed. I further went on to suggest future additions to the software such as an AI speech-to-text feature that could transcribe previous meetings and case recordings. I responded to any questions in a simple manner, breaking down any terms that were misunderstood or confusing while still conveying the main information that I wanted to.

O - By the end of the meeting, all the IT workers, technical and non-technical, understood how AI can make an impact in their systems and how they can implement these changes to either solve existing problems or create future improvements. There was a general consensus on how they could get to work with implementing some of these changes and how I could do most of the technical work and help support the integration with the existing systems.

**Copilot**

You're in the final stretch—let's make sure you step into your interview feeling prepared and confident. Here's a quick checklist for your last-minute prep:

**1. Final Review of Key Topics**

Since your interview is competency-based, focus on:

- **Company Knowledge:** Leeds City Council's mission, values, and recent initiatives (e.g., cloud migration projects, digital transformation).
- **Industry Context:** Challenges in public sector IT, benefits of cloud computing, and cybersecurity concerns.
- **Role-Specific Knowledge:** Cloud & Platform Engineer responsibilities, AWS & Azure environments, automation, and troubleshooting methods.
- **Your Unique Strengths:** Link your experience at BCFT to how you can contribute in a placement capacity.

**2. Refine Your Answers Using STAR Method**

Since you already prepared responses in STAR format, make sure they are: ✓ **Concise** (don't over-explain, but provide enough detail).

✓ **Impactful** (emphasize results and your contributions).

✓ **Clear and Confident** (even if you're nervous, maintain good pacing).

Your example about communicating AI concepts is **strong**—the breakdown of technical information for non-technical audiences showcases adaptability and leadership. Before the interview, **mentally rehearse it aloud** so you can deliver it smoothly.

**3. Prepare for Common Follow-Up Questions**

They might probe deeper with:

- **"What was the most challenging part of this presentation?"**
- **"How did you ensure everyone understood?"**
- **"What feedback did you receive, and how did you apply it?"**

Think about quick, natural responses to these—they don't need to be lengthy, just precise.

**4. Plan Your Own Questions**

At the end of the interview, **always** ask thoughtful questions:

- **"What challenges is the Cloud & Platform team currently tackling?"**
- **"How will placement students be involved in hands-on projects?"**
- **"What skills do you think are most valuable for success in this role?"**

Having questions ready **shows engagement and initiative**.

**5. Quick Mental & Physical Preparation**

- **Confidence Boost:** Remind yourself that you're here because they see potential in you.
- **Deep Breaths:** A few controlled breaths help keep you focused and relaxed.
- **Good Posture:** It may sound simple, but sitting upright projects confidence.
- **Eye Contact & Clear Speech:** Stay composed and professional.

**Final Thought**

You've done the research, prepared your answers, and know your strengths—now **trust yourself** and go in with confidence. You've got this, Hasan!

Good luck, and let me know how it goes afterward!

**You**

The interview is now finished, it went well I feel. How can I write an email to my university career's advisor telling her about the interview. she also wanted to know about the questions they asked so I gathered these, there were 9 main questions in total:

1. Tell me about yourself
2. What do you know about what we as a council do?
3. What do you know about servers and cloud?
4. What programming languages do you know?
5. How would you go about developing a software project?
6. What does 'communication' mean and what are the different aspects?
7. What does 'equal opportunities' mean and what other values of the council do you know?

**Copilot**

That's great to hear! Here's a professional and concise email template you can use to update your university careers advisor about the interview:

---

**Subject:** Update on My Leeds City Council Placement Interview
Dear [Careers Advisor's Name],
I hope you're doing well. I wanted to update you on my interview today for the Cloud & Platform Engineer placement role at Leeds City Council. Overall, I feel it went well—I was able to confidently discuss my experiences, skills, and understanding of the role and the council's values.
As requested, here are the main questions I was asked during the interview:

1. Tell me about yourself.
2. What do you know about what we as a council do?
3. What do you know about servers and cloud?
4. What programming languages do you know?
5. How would you go about developing a software project?
6. What does 'communication' mean and what are the different aspects?
7. What does 'equal opportunities' mean and what other values of the council do you know?

I appreciate all the support and advice leading up to this interview, and I'd love to hear any thoughts or feedback on how I could further improve for future opportunities.
Looking forward to catching up soon.
Best regards,
Hasan Akhtar

---

This email keeps it professional, informative, and engaging while inviting further discussion. Let me know if you'd like to tweak anything!

**You**

How can I send a thank you email to the interviewers and how long after my interview should I send it?

**Copilot**

It's a great idea to send a thank-you email—it leaves a positive impression and reinforces your enthusiasm for the role. Ideally, you should send it within **24 hours** of your interview to ensure it's timely and relevant. Here's a professional yet warm email template you can use:

---

***Subject:*** *Thank You for the Interview – [Placement Role]*
*Dear [Interviewer's Name],*
*I hope you're doing well. I wanted to take a moment to sincerely thank you for the opportunity to interview for the [Cloud & Platform Engineer placement] at Leeds City Council. It was a pleasure speaking with you and learning more about the role, the team, and the council's digital initiatives.*
*I really appreciate the insights you shared during our conversation, and I'm even more excited about the prospect of contributing to Leeds City Council's cloud projects. The discussion reinforced my enthusiasm for applying my technical skills and growing within a supportive environment like yours.*
*Please pass on my thanks to the rest of the panel as well. I look forward to hearing any updates regarding my application. Regardless of the outcome, I truly appreciate the opportunity to interview and gain a deeper understanding of your team's work.*
*Best regards,*
*Hasan Akhtar*

---

**Extra Tips:**
✓ **Personalize it** – If there was a specific part of the interview that stood out, mention it briefly to make it more engaging.
✓ **Keep it concise** – No need for a lengthy email; a short and genuine message is perfect.
✓ **Proofread before sending** – A polished email reflects professionalism.

Would you like help fine-tuning any details based on specific topics from your interview? Let me know, and I'll tailor it further!

**You**

(Now Tuesday, May 27)
They said they would call me if I got the offer, how should I respond in this situation and what should I say, especially given that it's a placement and relevant details would need to be sorted with university as well?

**Copilot**

Great! If you receive the call offering you the placement, here's how you can respond professionally while ensuring that university arrangements are considered:

**1. Express Gratitude & Enthusiasm**

Start by thanking them for the opportunity:

- **"Thank you so much for this opportunity! I'm really excited about the chance to contribute to Leeds City Council's cloud and platform projects."**
- Show appreciation for the interview process and their time.

**2. Confirm Key Details**

Since this is a placement, clarify important logistics:

- **"Could you provide more details on the next steps regarding contracts, start date, and onboarding?"**
- **"I'll also need to coordinate this with my university—are there any documents or formalities required from my side?"**
- If applicable, ask about working hours, remote/hybrid work options, and expectations.

**3. Ask About University Coordination**

Your university may need to approve and facilitate arrangements:

- **"Since this is part of my placement year, I'll need to liaise with my university about the formal process—should I put you in touch with them, or is there a specific procedure for students in placements?"**
- **"Are there any forms or agreements I need to send to my university for confirmation?"**
- If necessary, ask who the best point of contact would be from their side to handle this.

**4. Wrap Up Professionally**

End on a positive and reassuring note:

- **"I'm really looking forward to working with the team and contributing to Leeds City Council's cloud projects. I'll follow up with any required details from my university as soon as possible."**
- **"Thank you again—I truly appreciate this opportunity, and I'm excited to get started!"**

---

**Bonus Tips**

✓ **Stay calm & professional:** If you're excited, that's great—but keep your tone clear and composed.
✓ **Have a notepad nearby:** Jot down any key details they mention.
✓ **Follow up via email if needed:** Once you finalize any university formalities, send a confirmation email to them summarizing the next steps.

Would you like help drafting a formal follow-up email after the call? Let me know—I'm happy to refine it with you!

**You**

They said they would get back to me in a few days, however it's been over a week now and no response, how can I send an email to them politely and professionally?

**Copilot**

Here's a professional and polite follow-up email you can send to check on the status of your application:

---

**Subject:** Follow-Up on Placement Interview – [Cloud & Platform Engineer]
*Dear [Hiring Manager's Name],*
*I hope you're doing well. I wanted to follow up regarding my interview for the [Cloud & Platform Engineer placement] at Leeds City Council. It has been over a week since we last spoke, and I wanted to check if there are any updates regarding the next steps in the selection process.*

*I remain very excited about the opportunity and the prospect of contributing to your team. I appreciate the time and effort you and the panel put into the interview process, and I'd be grateful for any updates you can provide when convenient.*
*Please let me know if there is anything else you need from me to assist in the decision-making process. Looking forward to hearing from you soon.*
*Best regards,*
*Hasan Akhtar*

---

**Extra Tips:**
✓ **Keep it professional and polite** – This maintains a positive tone without sounding impatient.
✓ **Make it short but effective** – They'll appreciate a concise, well-written email.
✓ **If needed, send it early in the day** – This increases the chance of a same-day response.

This message gently reminds them while keeping things professional. Let me know if you'd like to make any adjustments!

**You**

(Now Wednesday, May 28)
The Computer Science society at university (PiSoc) are currently open for executive position applications and one of the current execs said that I should DM here on discord. How can I send a short application that also summarises my past professional experiences?

**Copilot**

You'll want to keep your message concise, professional, and engaging, while also highlighting your relevant experience. Here's a solid template you can use when reaching out via Discord DM:

---

**Hey [Exec's Name],**
I hope you're doing well! I heard that PiSoc is currently accepting applications for executive positions, and I'd love to express my interest in joining the team.
I'm a second-year Computer Science student at the University of Bradford with experience in automation, cloud technologies, and data analysis. Through my role as an IT Automation Officer at Bradford Children and Families Trust, I've developed an AI-powered document extraction tool and implemented automation solutions using Power Automate. Additionally, my academic projects in cloud computing and software development have given me hands-on experience with platforms like Microsoft Azure and Google Cloud Workspace.
I'm really passionate about fostering a strong tech community and would love the opportunity to contribute to PiSoc, whether that's through organizing events, mentoring students, or driving initiatives that help members grow their skills. Let me know if you need any more details—happy to discuss further!
Looking forward to hearing your thoughts.
Best,
Hasan

---

This keeps it professional yet friendly and ensures you highlight your skills while showing enthusiasm for PiSoc. Feel free to tweak it based on the specific role you're applying for! Would you like help refining it further?

---

Conversation by Fifa Utuber with Copilot from Saturday, May 10 2025 to Wednesday, May 28 2025
